

## TUFS Safety Confirmation System

To respond to disasters and emergencies such as major earthquakes, TUFS has introduced “ANPIC”, a safety confirmation system, which has been in official operation since December 2022.

**When you receive the notice, follow the guide to the URL below to complete the initial registration (main registration) for the safety confirmation.**

### **【Purpose】**

The purpose of this system is to quickly ascertain the safety of students, faculty, and staff via the internet in case of a major disaster or emergency so that the university can quickly respond to the situation. The system may also be used to send out simultaneous notices and questionnaires to you in the case of typhoons or heavy snowfalls.

### **【Safety through the Safety Confirmation System】**

If an earthquake of “intensity 6 and above” occurs in the Kanto region, the safety confirmation system is automatically sent to your email address or smartphone application of those registered in advance. When you receive a safety confirmation notice, please ensure your safety and use the device from which you received the notice to contact us with your safety status, comments, etc. by simple input operations.

In the case of safety confirmations or disaster drills other than major earthquakes, the division in charge will send a confirmation notice.

### **【Request on starting to use the safety confirmation system】**

We will inform you again when the system is ready for you to use the safety confirmation system (**expected around mid-May**). When you receive the notification, please access the following website and follow the initial registration guide to complete the initial registration (main registration).

URL:<https://www.tufs.ac.jp/english/abouttufs/outline/riskmanagement/anpic.html>

Students, faculty, and staff must complete the initial registration (main registration) and, if you have a smartphone or other device, set it up to enable notifications and reports via apps and LINE. If you use usually a feature phone (a flip phone), please add your mobile email address.

© For further information on this matter, please contact us via the below email.
